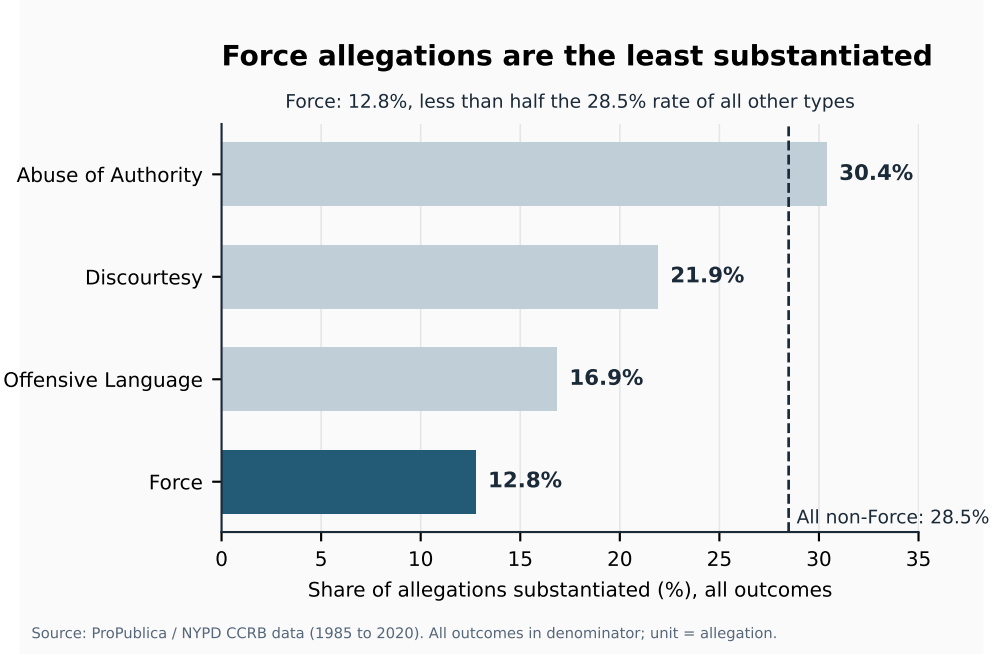
NYPD CCRB Complaints | Supporting Side

Proposition: Force allegations are substantially less likely to be substantiated than other misconduct allegations.



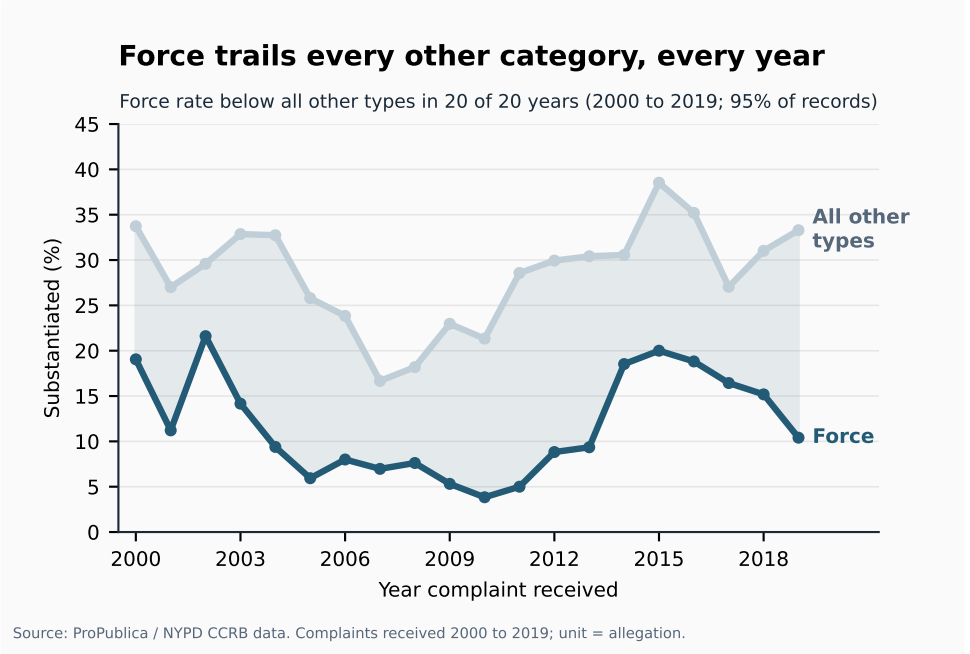


Figure 1: Full substantiation rates

Counts every outcome. Force (12.8%) ranks last, below Offensive Language (16.9%), Discourtesy (21.9%) and Abuse of Authority (30.4%).

Figure 2: Force vs. everything else over time

Force stays under all other types each year from 2000 to 2019, the period holding 95% of the records.

How these charts persuade

Figure 1: a full denominator keeps exonerated cases in, where Force is the most common outcome (45.8% of Force allegations), so Force falls to last.
Figure 2: starting at 2000 drops the sparse 1985 to 1999 years (where Force sometimes ran higher), and one combined comparison line makes the gap look constant.

Source: supplied CCRB complaint dataset (1985-2020). Unit of analysis: allegation, not unique complaint.
